Grover Aruquipa

Ph.D. Candidate in Mechanical Engineering • Université Laval, Québec, Canada

grover.aruquipa.9@gmail.com • groveraruquipa.github.io • ORCID 0000-0003-0243-3187

Research Profile

I design, build and control robots whose capabilities come from the mechanism itself: parallel robots with kinematic redundancy, unlimited rotations and grasping produced by the structure rather than by an added end-effector. My work runs from type synthesis, kinematics, statics and singularity analysis, through simulation and mechanical design, to fabricated prototypes driven by real-time multi-motor control.

Output at a glance. 3 journal articles and 3 refereed conference papers published, first author on all; 4 papers under review (3 journals, 1 ICRA); 3 prototypes designed, built and experimentally validated; 2 graduate students supervised day to day. First place, ASME Student Mechanisms and Robotics Design Competition (2025); finalist, MassRobotics Form & Function Challenge (2026).

Education

Ph.D., Mechanical Engineering 2023 – Jan. 2027 (expected)

Université Laval, Québec, Canada. Supervisor: Prof. Clément Gosselin; co-director: Prof. Patrice Lambert.

Dissertation: *Kinematically redundant parallel robots with articulated platforms for unlimited rotation and grasping.*

M.Sc., Ingénierie des systèmes complexes, Smart Integrated Systems 2021 – 2023

Université Bourgogne–Franche-Comté (UBFC), Besançon, France. Mention Bien; 120 ECTS. Supervisor: Prof. Redwan Dahmouche. Research thesis with FEMTO-ST (CNRS UMR 6174).

B.Eng., Mechatronics Engineering 2014 – 2019

Bolivian Catholic University, La Paz, Bolivia. Thesis on a reconfigurable Delta-type parallel robot for product picking.

Awards, Distinctions and Scholarships

1st Place, Graduate Division, ASME Student Mechanisms and Robotics Design Competition (SMRDC) 2025

ASME IDETC/CIE, Anaheim, 17–20 Aug. 2025. Team led by me; entered as *The First Parallel Robot with Two Unlimited Rotations*.

Finalist, MassRobotics Form & Function Challenge (Boston; three-rotation prototype) 2026

Mitacs Globalink Research Award (GRA) 2026

Mitacs, Canada; competitive award funding a research stay at JKU Linz with Prof. A. Müller.

1st Place, Student Paper Competition, X Jornadas Argentinas de Robótica (JAR) 2019

Universidad Nacional del Comahue, Neuquén, Argentina.

Doctoral and master's funding 2021–2026

Université Laval Ph.D. Scholarship and Citoyens du Monde Grant (2023–2026) • Screw Theory Summer School, TU Delft (2023) • UBFC Master's Scholarship (2021–2023).

Publications

Author order reflects contribution; my name is **G. Aruquipa**. Q1 denotes journal quartile (Scimago).

Peer-reviewed journal articles (published)

Manuscripts in preparation

G. Aruquipa, A. Müller, P. Lambert, C. Gosselin, reduced graspability Jacobian for parallel robots with rotationally articulated platforms (in co-author review).

Prototypes and Experimental Systems

Coaxial parallel wrist-gripper, 4 DoF 2025–2026

Four actuation channels through concentric hollow shafts, 180 mm footprint, 0.25 kg moving mass; unlimited tool-axis rotation with a non-backdrivable gripper. Real-time control at 500 Hz, validated over ten continuous revolutions with sub-degree tracking.

(6+1)-DoF redundant parallel robot with integrated grasping 2024–2025

Seven base-mounted actuators; gripper driven from the base through a concentric tube.

Redundant parallel robot with coaxial actuation 2024–2026

Built with the two graduate students I supervise; finalist, MassRobotics Form & Function Challenge (2026).

Research and Professional Experience

Visiting Researcher, Institute of Robotics, Johannes Kepler University Linz Apr.–May 2026

Linz, Austria. Host: Univ.-Prof. Andreas Müller. Singularity analysis and graspability performance indices for parallel robots with integrated grasping; funded by the Mitacs Globalink Research Award.

Doctoral Researcher, Robotics Laboratory, Université Laval 2023–2027

Type synthesis, kinematic and singularity analysis, mechanical design, fabrication and real-time control of redundant parallel robots with unlimited rotation and integrated grasping.

Research Intern, FEMTO-ST (CNRS UMR 6174), Besançon, France 2022–2023

Master's research on a redundant dexterous parallel robot for micro-manipulation; real-time C++ control software.

Industry and data science: Hitachi ABB Power Grids R&D, Zurich; Sencon Srl; KTH (Sweden) 2020–2021

Supervision, Service and Outreach

Co-supervision of graduate research 2025–2026

Day-to-day supervision of two graduate students, Brandon Valencia and Alireza Hobubaty, on a kinematically redundant parallel robot, from concept to a working prototype.

Reviewer, *ASME Journal of Mechanisms and Robotics* 2026–present

Outreach and mentoring, Bolivia 2016–present

Lectures on parallel robots at Bolivian universities; scholarship mentor, TuBeca Bolivia; volunteer, HOPE Worldwide.

Technical Skills

Modelling and analysis: screw theory, Lie group methods, type synthesis, statics, singularity and workspace analysis; MATLAB. **Simulation:** MuJoCo, Simscape (dynamic models validated against hardware). **Motor control and real time:** multi-motor pipelines at 500 Hz with incremental encoders, OPAL-RT RT-LAB, Simulink Real-Time, real-time C++. **Robotics software:** ROS and ROS 2, MoveIt, Pinocchio, OpenCV, Python. **Design and fabrication:** SolidWorks, Altium; machining, SLS and FDM printing, wiring and assembly of prototypes. **Machine learning:** PyTorch. **Languages:** Spanish (native), English (full professional), French (intermediate).
